

Distance + Efficiency + Possibilities =

ELECTR  **MEET**

Help cut training and travel costs!

ElectromeeT is software that allows you to join or provide live online sessions. It efficiently brings distant people together in a "virtual room" for affordable web conferencing and remote laboratories.

Real-time online training & eLearning

- Enhance learning experiences
- Improve retention and completion

Remote support

- Bring an expert to site without travel
- Fast, efficient troubleshooting
- Long distance "desktop" sharing

Remote laboratories

- Access to labs around the world
- Safe, managed experimentation and practice with real equipment

Online meetings & collaboration

- Reduce expenses
- Improve communication
- Quick and informal or tightly structured

Product Training

- Live online demonstrations for remote sites
- Reduce time and limit travel

Online presentations

- Interactive presentations using advanced tools
- Reach multiple locations simultaneously
- Engage and stimulate

Offices in: AUSTRALIA ▪ CANADA ▪ INDIA ▪ IRELAND ▪ MALAYSIA ▪ NEW ZEALAND ▪ POLAND
SINGAPORE ▪ SOUTH AFRICA ▪ UNITED KINGDOM ▪ UNITED STATES ▪ VIETNAM

Electromeeet is so simple to install that you can join your first session in minutes.

One click on the Access Key and you will enter a virtual room, with a range of interactive tools available.

Electromeeet aims to be simple, effective, flexible, and reliable. It is software that you'll soon master, freeing you to focus on the content and purpose of your online work.

Download your own free copy at
www.electromeeet.com

Installed Electromeeet?

You now have three options:

- 1** Use the Access Key link sent to you by a Provider to join a session at the appropriate time.
- 2** Use the software to playback a recording of an Electromeeet session. You would need to obtain a link to the recording from a Provider.
- 3** Try or Buy a **Provider Licence** so that you can provide your own sessions. The trial version is free, and **Special First Release Offers** apply to the full licence. See the website for details.

Simple ■ Effective ■ Flexible

Interactivity at your fingertips...

Two-way audio

- VoIP ("voice over internet" technology) with amazing clarity
- Listen to others and have your say - live

Instant text messaging

- Send text messages to all or selected participants

Whiteboard

- Draw and annotate on the shared whiteboard using simple tools
- Display slides and images for immediate discussion
- Respond instantly to poll questions and quizzes

Participant information

- Use emoticons to convey your thoughts during a session
- Watch interactions of other participants

Video

- Watch the presenter live on your screen
- Transmit video from your location to others

Web tour

- Tour websites led by your presenter

Desktop sharing

- Watch as the presenter shows remote applications at work
- Opportunity to operate other applications remotely

Record and playback

- Record entire sessions for playback
- Build your own library of recorded sessions in highly compressed format

ELECTROMEET FEATURES	PROVIDER LICENCE TYPE		
	Trial	50-user	>50+ users
Number of users (Presenters + Participants)	50	50	ON APPLICATION
Cost of <i>Provider</i> Licence - Free to use to join sessions and playback recordings	free	US\$480.00	
Cost of Extra Provider Licence - Each additional licence = 1 extra room (24/7) for up to 50	n/a	US\$240.00	
Duration of licence (Special First Release Offer)	30 days	24 months	
Enable Premium Modules* with licence (optional extra cost)	n/a	US\$1510.00

Hardware patch panel for experiments (Participant version)	\$Option	\$Option	

* Premium Modules are advanced features and will be added progressively to the software

ELECTROMEET - Be part of the Story

How it started

Over the last 15 years at IDC Technologies we've trained over 200,000 engineers and technicians from all over the world. Our early training was almost 100% face-to-face, classroom-based instruction. We witnessed the early forays of others into web-based training. In many cases we saw that these attempts were not much more than "books on the web", with nothing to approach the learning retention or completion rates of face-to-face instruction. Following the early hype many people became disillusioned with "eLearning", thinking that it necessitated hours spent in isolation with little offered to motivate or interest and no interaction.

Changed Technology

Exponential developments in internet technology have changed eLearning. The "book on the web" no longer represents all that we can expect. Instead, it is possible to provide a live, interactive session which captivates and motivates students. An expert presenter can work from a home office to reach an audience located just about anywhere in the world, and make use of a range of sophisticated tools.

The Design Brief

Our experience indicated that some eLearning packages did not meet the rather unique needs of engineers, technicians, and other technical professionals. In 2006 we commissioned a team of expert programmers to develop our own software for delivery of eLearning. The philosophy behind the design brief was for the software "to be simple, effective, flexible, and reliable". We wanted software that was intuitive, so that the content and purpose of the live sessions remained paramount.

Electromeeet is the result of almost 3 years of hard work and experience. Although developed with technical training in mind, it is a vehicle that has potential for a range of online uses. Some are mentioned in this brochure.

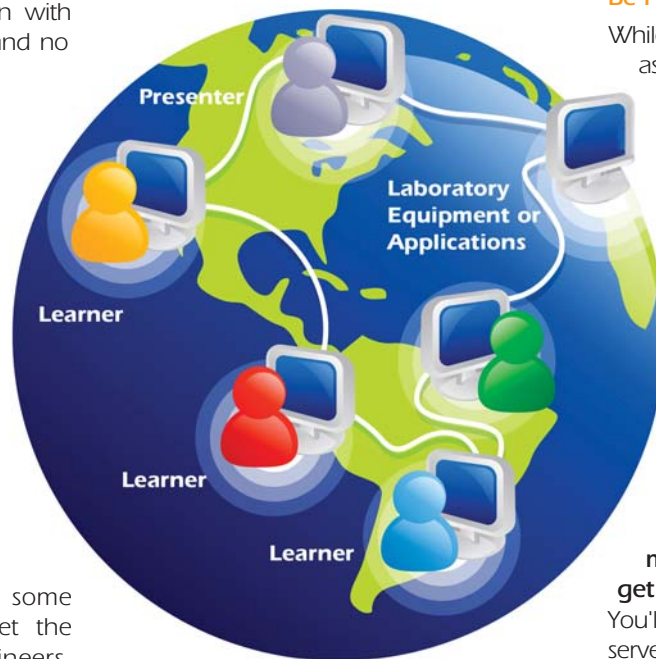

Part of a Blend

Electromeeet allows interaction with colleagues and clients situated throughout the world. It will cut down on travel expenses plus venue costs and has the potential to improve your training and learning experience. Electromeeet may not replace face-to-face training, but it is

certainly poised to become a major part of the blend in your learning environment, complementing and enhancing traditional delivery methods.

How it Works

People who want to join an Electromeeet session simply download the installation package from electromeeet.com. It is free to download. Once installed, the software can be used to join a session, playback a recorded session, or Provide sessions for others.

When participants are invited to join a session they each receive an "Access Key" from their Provider (the company or individual who is going to provide the session). At the appointed time and with one click on the Access Key, participants enter a virtual room and use tools such as instant texting, 2-way speech, interactive whiteboard, video and more. Replaying a recorded session is as simple as clicking on the highly compressed recording file sent by a Provider.

In order to Provide sessions for other people a Provider Licence is purchased. This is an annual subscription. The cost of the subscription provides 24 hour a day, 7 day per week access to a private "virtual room". The Provider is given a set of Access Keys that can be emailed to whoever else is to join the session(s) in the virtual room.

More details about how to join or provide sessions can be found at www.electromeeet.com.

Possibilities

The possibilities for Electromeeet are immensely exciting, and we've not begun to explore them all. Imagine being able to provide access to remote laboratories that allow students to experiment with real equipment located remotely. Or consider bringing an international expert to site "remotely" for a live consultation with key staff. Electromeeet can do this now! We are working on a module that will permit a presenter to take students on a real-time tour of actual industrial sites.

Be Part of the Story

While Electromeeet is in "First Release" we want as many people as possible to use and present sessions with a Provider licence. We encourage you to register for your own trial licence and use it to present your own sessions - with colleagues, students, friends and family from anywhere. Provide us with feedback and **be part of the Electromeeet story.**

After the **30 day trial period** is finished you have no obligation to go any further. But if you like the software and you have used it a few times in the 30 Day Trial period, we'll offer you a choice: extend your **free trial for another 3 months**, OR buy a 20-user licence and **get 24 months for the cost of 12 months.** You'll have your own virtual room on our server for 2 years!

Go online now to register for your 30 day free trial:
www.electromeeet.com.

Any questions? Email us now at ric.harrison@idc-online.com.

Be part of our growing community of users and take advantage of the First Release Offer.
